

Job: E-commerce and Web Development Support
Area of expertise: e-commerce, Wordpress, PHP, Google Docs, database

What we need

We are looking to develop a simple app designed to run on an Android tablet. Please refer to the wireframe to understand the functionality and desired layout: <http://bit.ly/1WMF5Nm>

The app logs the name, email and length of time of people visit our site. There are three categories of people, "New Volunteers", "Existing Volunteers" and "Visitors". The data is extracted as a csv file.

We would like this app to be available for distribution under a Creative Commons license (Attribution-ShareAlike 4.0 International) to enable other organisations to benefit from its development.

The app should be able to run without an internet connection.

Expressions of interest

Please contact us with your proposal, outlining your skills, experience, suggested approach to this work and your anticipated costs.

Please write to Samuel Smith: sam@suttoncommunityfarm.org.uk.
